

YR 3 & 4: TEXTILES

KNOWLEDGE ORGANISER

Sticky Knowledge

Fabrics

Fabrics are made from fibres. Fibres are twisted together by spinning to make yarn. Yarn is knitted or woven to make fabrics.

Different fabrics have different properties (characteristics) which make them good for different purposes. For example, some are soft and provide a cushion (e.g. felt) whilst others can be thin and lightweight (e.g. silk, cotton.) Rubber and leather are durable and tough, whereas wool is warm.

Design Criteria

Designers of textile products need to think about the **consumer** (who will use it?) You need complete some **market research** to find out their likes and needs. You must think about the **purpose** (what does it do?) What materials will work best? This is called the **design criteria**. You also need to **evaluate** your product to see how well it meets the **design criteria**.

Information linked to learning

Pattern – A pattern is like a template, usually made from paper, which is pinned onto fabric and traced around.

The parts of a garment or textile product are then cut out and assembled.

Seam - the join where two or more layers of fabric, leather, or other materials are held together with stitches. The textile is usually sewn inside out and when the finished item is turned the right way round it is tidy and neat.

Seam allowance– The extra measurement of fabric that must be planned into patterns to allow for the seam .

Health and Safety

-Remove any jewellery and tie back long hair.

-Walk safely and calmly around the classroom.

-When you are not using your needle, keep it in the same safe place.

-If you need to move around with scissors, hold around the closed blades, facing down.

-Report any accidents & clean up properly after yourself.

Key Vocabulary/ skills

applique – a sewing technique that involves stitching a small piece of fabric onto a larger one to make a pattern or design.

aesthetics – how pleasing your product is to look at.

Back Stitch – Similar to the running stitch, except that the thread doubles back so that there is no visible spacing between stitches. It is a very strong and secure stitch.

Over Sew Stitch – The over sew stitch is a good way to neaten the raw edge of fabrics or add decoration. The stitch goes over the two edge of the fabrics and underneath each time.

Blanket Stitch – Another way to reinforce the edges of thick materials. This stitch adds decoration and can be seen from both sides..
